SD BIOSENSOR STANDARD™ F

POC respiratory disease diagnostics.

Reliable and fast diagnostics of respiratory pathogens

SD BIOSENSOR STANDARD™ F is a fluorescence immunodiagnostic assay (FIA) IVD test system for various respiratory pathogens. STANDARD F respiratory pathogen test kits cover the most common pathogens causing colds and influenza, bronchitis, and pneumonia.

STANDARD F test kits are used together with the STANDARD F200 analyzer or the STANDARD F2400 analyzer to enable fast and reliable results.

High quality fluorescence immunoassays

- Accurate and objective results
- Traceability
- Ready-to-use reagents
- Simple test procedure
- Room temperature storage

An easy-to-use and flexible system

- Two models to suit different needs: F200 and F2400
- Minimized risk of contamination
- Random access (F2400 Analyzer)
- Versatile connectivity options

For more details, please consult instructions for use.

Comprehensive respiratory pathogen portfolio

- [STANDARD F COVID-19 Ag FIA](#) for detection of SARS-COV-2 viral nucleoprotein antigens in human nasopharyngeal swab samples.
- [STANDARD F Influenza A/B FIA](#) for detection of influenza nucleoproteins in nasal or nasopharyngeal swab, wash, or aspirate samples.
- [STANDARD F COVID/Flu Ag Combo FIA](#) for the qualitative detection of specific antigens to SARS-CoV-2, Influenza A and B in nasal and nasopharyngeal swab samples.
- [STANDARD F RSV Ag FIA](#) to detect RSV antigen in nasopharyngeal swab or nasopharyngeal aspirate/ wash samples providing an initial screening test result.
- [STANDARD F Strep A Ag FIA](#) for detection of Group A Streptococcal (Strep A) infection in throat swabs or as a confirmatory test from culture colonies.
- [STANDARD F Adeno Respi FIA](#) for detection of adenovirus infection in nasal or nasopharyngeal swabs providing an initial screening test.
- [STANDARD F Legionella Ag FIA](#) for the detection of *Legionella pneumophila* serogroup 1 antigen present in urine samples for an initial screening result.
- [STANDARD F S.pneumoniae Ag FIA](#) for the detection of *S.pneumoniae* CPS Ag present in urine samples and in cerebral spinal fluid (CSF) samples proving an initial screening test result.
