POC gastrointestinal infection diagnostics.

SD BIOSENSOR STANDARD™ F

POC gastrointestinal infection diagnostics.

Reliable and fast diagnostics of gastrointestinal pathogens

SD BIOSENSOR STANDARD™ F is a fluorescence immunodiagnostic assay (FIA) IVD test system for various gastrointestinal pathogens. STANDARD F test kits for gastrointestinal diseases cover pathogens infecting the intestinal tract. They give fast initial results to aid in making an early diagnosis.

STANDARD F test kits are used together with the STANDARD F200 analyzer or the STANDARD F2400 analyzer to enable fast and reliable results.

High quality fluorescence immunoassays

- Accurate and objective results
- Traceability
- Ready-to-use reagents
- Simple test procedure

An easy-to-use and flexible system

- Two models to suit different needs: F200 and F2400
- Minimized risk of contamination
- Random access (F2400 Analyzer)
- Versatile connectivity options

For more details, please consult instructions for use.

Comprehensive gastro-intestinal pathogen portfolio

- [SD BIOSENSOR STANDARD F Norovirus Ag FIA](#) for the qualitative detection of Norovirus antigen in human faecal samples
- [SD BIOSENSOR STANDARD F Rota/Adeno Ag FIA](#) for the qualitative detection of Rotavirus and/or Adenovirus antigens in faecal samples.
- [SD BIOSENSOR STANDARD F C. difficile Toxin A/B FIA](#) for the qualitative detection of *Clostridium difficile* Toxin A/B in human faecal samples.
- [SD BIOSENSOR STANDARD F C. difficile GDH FIA](#) for the qualitative detection of *Clostridium difficile* GDH (Glutamate Dehydrogenase) in human faecal samples.
- [SD BIOSENSOR STANDARD F H. pylori Ag](#) for the qualitative detection of *Helicobacter pylori* antigen in human faecal samples.
