Brief instructions

**QuikRead go® CRP**

1. Remove the foil cover from the cuvette. Do not touch the clear flat surfaces in the lower part of the cuvette.

2. Fill the blue striped capillary with the sample (20 µL) up to the white stopper. Ensure that there are no air bubbles in the capillary. Wipe away any residual sample from the outside of the capillary.

3. Place the sample (20 µL) into the buffer solution in the cuvette and dispense by pressing down the plunger. Make sure that the capillary is completely empty.

4. Close the cuvette tightly with the CRP reagent cap. Do not press down the blue inner part of the reagent cap. Perform the test within 2 hours.

5. Choose Measure on the display of the QuikRead go instrument.

6. Insert the cuvette into the measurement well of the instrument. The barcode should be facing you.

7. The result appears on the display and the cuvette rises up automatically when the measurement is completed.

Please consult the instructions for use before performing the test.
